<b>Contractual modality:</b>	Transfer contract	<b>Years of Contract:</b>	-
<b>Competent Entity:</b>	MINISTRY OF ENERGY AND MINES		

The OPEX of the first ten (10) years of the operational stage of the project without VAT is considered.

### RESUME

The El Algarrobo project is a private initiative within Active Projects that encompasses the exploration, underground exploitation, and processing of a mineralized deposit of copper, zinc, and silver in the mining concessions Tambo Grande N°4, 5, 9, and 10. Additionally, it includes the execution of hydraulic infrastructure with a focus on sustainable development aimed at ensuring water supply to the communities. The project will be developed in stages, beginning with the construction of hydraulic infrastructure and obtaining a Social Agreement that will allow for the initiation of mining operations, followed by exploration studies and the construction of the mine.
