| Project name: | Social Management, Design and Execution of Hydraulic Infrastructure Projects, Construction, Implementation, and Exploitation of the Mining Concessions Comprising the TG-3 Deposit of the El Algarrobo Project. | | |
| Type: | Unsolicited proposal Project in assets | Phase: | Transaction |
| Investment Amount (Without Taxes) | US\$ 2753.00 millions | State: | Awarded |
| Contractual modality: | Transfer contract | Years of Contract: | - |
| Competent Entity: | MINISTRY OF ENERGY AND MINES | | |

RESUME

The El Algarrobo project is a private initiative within Active Projects that encompasses the exploration, underground exploitation, and processing of a mineralized deposit of copper, zinc, and silver in the mining concessions Tambo Grande N°4, 5, 9, and 10. Additionally, it includes the execution of hydraulic infrastructure with a focus on sustainable development aimed at ensuring water supply to the communities. The project will be developed in stages, beginning with the construction of hydraulic infrastructure and obtaining a Social Agreement that will allow for the initiation of mining operations, followed by exploration studies and the construction of the mine.
